Art Unit: 3742

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of Fishman et al (U.S. Patent No. 6,690,710) in view of Betz et al (US 5,425,047). Fishman et al ('710) disclosed and claimed (i.e., claims 1-20) all features recited in claims 1-20 of the instant application except for a means for rotating the crucible. It is noted that the use of such means or devices for rotating and/or tilting the crucible in induction furnaces is so well known in the art, as evidence, Betz et al shows such means for rotating as well as tilting the crucible 3 in an induction furnace (Figure 1) in the form of rocking arms disposed on both sides and arranged parallel to the plane of rotation of the crucible axis. It would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize in Fishman et al ('710) such means for rotating/tilting the crucible as taught by Betz et al in order to selectively rotate or tilt for discharging the melt as well as stirring the melt.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Fishman et al (US 6,393,044), Hugo et al (US 6,101,212), and Sawada et al (US 4,330,698).
